
SUMMIT
COMMUNITY SERVICE SEGMENT
REMNANT UPCYCLE

INTRODUCTION

- The Community Service category is designed to turn everyday waste into something valuable. Participants spot a real problem around them and solve it using only recycled material, then document the whole journey on video.
- The category sharpens creativity, problem-solving and environmental responsibility, and shows that a good idea does not need new resources, only a new way of looking at old ones.
- It builds innovation, resourcefulness, planning and storytelling skills. Participants learn to think like problem-solvers, and the habit of seeing “waste” as “material” stays with them long after the event.

EVENT OVERVIEW

1. CHOOSE A REAL PROBLEM

- Look around your home, school or neighbourhood and pick a genuine problem people face.

2. DESIGN A SOLUTION

- Your solution must be built entirely from recycled or waste material.
- Example problem: lack of access to clean drinking water.
- Example solution: a water filter made from a used plastic bottle, sand, gravel and charcoal.

3. BUILD IT AND RECORD IT

- Your video is your proof, so it must clearly show:
- Where the waste material was collected from.
- How it was processed, step by step.
- The final item and how it solves the problem.

VIDEO RULES

- No face should be shown.
- No music – natural sound or voice-over only.
- Keep the footage clear and around 2 to 5 minutes.

THE WINNER’S SPEECH

Length: 2 to 3 minutes

- Cover these points:
  - Inspiration: where did the idea come from?
  - Challenges: what went wrong or was difficult, and how did you handle it?
  - Purpose: what problem does your item solve?
  - Sustainability: how long will it last, and what impact does it have?
  - Anything else you want to share.
